

ABOUT ME

I'm a Computer Engineering student who loves developing both mobile and web applications. I mainly work with Java, XML, and PHP, creating projects that are responsive, interactive, and efficient. I enjoy designing interfaces, managing databases, and mapping out systems through diagrams and ERDs to bring my ideas to life.

TECHNICAL SKILLS

Programming Languages: XML, PHP, Java,Node js,JavaScript
Developer Tools: GitHub, Visual Studio Code, Visual Studio, SQL Server Management Studio, Android Studio,mySQL,PostgreSql 18
Database: Microsoft SQL Server, Supabase, Firebase, postgresQL
Others: Mobile Application Development using Java & XML (Android Studio),Responsive UI Design with Bootstrap Studio,React and Vue

PROJECTS

Venture Inventory System| HTML,JAVASCRIPT,mySQL

- System and UI Design:** Developed a web-based inventory system using PHP, HTML, and JavaScript, featuring responsive layouts, interactive dashboards, and intuitive navigation. The design followed modern UI/UX principles, ensuring accessibility, ease of use, and data-driven visualization for efficient inventory monitoring.
- Database Management and Connectivity:** Designed and implemented a relational MySQL database to efficiently manage product information, stock levels, and transactions. Established secure data connectivity between the front-end and back-end using PHP-based CRUD operations for smooth, real-time data handling..
- System Architecture and Functionality:** Built a modular back-end structure that handled user authentication, data validation, and automated inventory updates. Ensured system scalability, efficient query execution, and seamless integration between different system components.

E-Tinapa App| Java, XML, Firebase ,IDE and Kotlin

- Project Overview:**Developed an Android application independently to integrate with a Tinapa (smoked fish) processing machine powered by Arduino. The app serves as the central interface for monitoring and controlling the machine’s operations..
- System and UI Design:**Designed the app in Android Studio using Java, Kotlin, and XML, featuring a clean and user-friendly interface for real-time status monitoring, temperature control, and process tracking.
- Database and Connectivity:**Implemented Firebase Realtime Database for data storage, communication, and synchronization between the mobile app and the Arduino system via wireless modules.
- System Architecture and Integration:**Programmed the app to send and receive operational data (temperature, humidity, and timer settings) from the Arduino through serial and network-based communication, ensuring precise and reliable control.
- Testing and Optimization:**Conducted extensive testing on both hardware and software components to ensure stable performance, accurate data exchange, and consistent machine operation.

Walkie talkie APP| Java, XML ,IDE and Kotlin

- **Project Overview:** Developed a real-time voice communication Android application using the Agora SDK, enabling users to communicate through live audio channels similar to a walkie-talkie system.
- Implemented voice streaming features, channel-based communication, and user connection handling to support real-time audio transmission with low latency.
- Designed an intuitive and responsive mobile interface for joining communication channels, managing voice sessions, and improving user interaction.
- Integrated Agora’s real-time communication services and tested audio reliability, connection stability, and overall application performance.

EDUCATION

MINDORO STATE UNIVERSITY – BONGABONG CAMPUS	S.Y 2022 - Present
Bachelor of Science in Computer Engineering	Dean’s Lister
ST. JOSEPH ACADEMY	S.Y 2020 - 2022
Science, Technology, Engineering, and Mathematics (STEM)	With Honors
BONGABONG TECHNICAL AND VOCATIONAL HIGH SCHOOL	S.Y 2016 - 2020
Junior High School	With Honors

ORGANIZATIONAL AFFILIATIONS

ICPEP-INSTITUTE OF COMPUTER ENGINEERS OF THE PHILIPPINES REGION-4B
2022-PRESENT |MEMBER
SUCCESS -SOARING FOR USEFULL AND COMPETITIVE COMPUTER ENGINEERING
STUDENT’S SOCIETY 2022-PRESENT | MEMBER
